Try Jooble REST API

Jooble allows webmasters of an internet portal or search engine to extend the functionality of their website. Our REST API allows you to take search queries from Jooble and post the results on your website in your own design. With this mechanism, your users will be able to look for jobs all over the Internet.

Your API key is ready

Your unique API key is: "712c16c3-9e10-40a7-a4da-97410d649a52". Please note that API has a default limit of 500 requests. If you want to increase the number of requests or have other questions, please write to us in response to this letter. Best regards, Jooble Team

Examples of using

Use any convenient code you like. Just show this part to your programmer.

- Php
- Javascript
- Ruby
- C# (.NET 4 or later)
- Python 3.5
- Python 2.7

```
<?php
```

```
$url = "https://jooble.org/api/";
```

```
$key = "<YOUR_API_KEY>";
```

```
//create request object
```

```
$ch = curl_init();
```

```
curl_setopt($ch, CURLOPT_URL, $url."".$key);
```

```
curl_setopt($ch, CURLOPT_POST, 1);

curl_setopt($ch, CURLOPT_POSTFIELDS, '{ "keywords": "it", "location": "Bern"}');

curl_setopt($ch, CURLOPT_HTTPHEADER, array('Content-Type: application/json'));

// receive server response ...

curl_setopt($ch, CURLOPT_RETURNTRANSFER, true);

$server_output = curl_exec ($ch);

curl_close ($ch);

//print response

print_r($server_output);

?>
```
